

NETWORK CAMERA

User Manual

Notice of Use

This manual is designed for administrators and users of the network camera. Please read it carefully before use. All requirements should be followed before using this camera.

- We are not responsible for any technical or typographical errors and reserves the rights to change the product and manuals without notice.
- Keep this document for future reference.
- The camera is for indoor use only.
- Please make sure the power source is 12V DC / 24V AC / PoE. Only connect to the camera to this required power system.
- The camera must be installed on a solid mounting surface.
- Keep the camera and other accessories dry.
- We are not responsible for any damage caused by inappropriate use.

1. Overview

1.1 Key Features

High Definition Images

Clear and detailed HD quality images in all conditions. Unlike traditional megapixel cameras, HD offers higher resolutions and better frame rates at an international industry standard. Blurry images are reduced and individuals and objects of interest come through in perfect clarity.

Triple Streaming

The Network Dome Camera is a high performance HD camera designed to show extreme image detail. H.264/MPEG4/MJPEG triple streaming allows you to choose the appropriate codec for your bandwidth. Using a video player (VLC player...etc), you can view your RTSP stream from anywhere.

Cost-saving H.264 Support

The Network Dome Camera supports the H.264 compression standard. H.264 greatly reduces the size of video compared to MJPEG and MPEG4 without compromising image quality. Storage and bandwidth needs are reduced. Plus, H.264 is expected to become the video standard of choice, so your camera is future proofed.

1.2 Package Contents

The Network Dome Camera package includes these items:

- Network Dome Camera x1
- Quick Start Guide x1
- CD-ROM x1
- Guide Pattern Sticker x1
- RJ-45 Female / Female Coupler x1
- Accessories:
 1. Flat Head Screw (Machine Type) x4
 2. Flat Head Screw (Tapping Type) x4
 3. Plastic Anchor x4
 4. Plastic Mounting Button x4
 5. Rubber Feet x4

1.3 Physical Descriptions

1.3.1 Dimensions

1.3.2 Connectors

- **Power In (Red+/Black-):** Connects to DC 12V / AC 24V power supply. If you are to use power from Ethernet connection, this connector is not used when the power is provided by PoE.
- **RJ-45 Ethernet Connector:** Connects to the LAN port of a standard 10Base/100Base-TX device, e.g., hub, switch or router.
- **BNC:** Connects to composite video in connector of a monitor. Note that when connecting the camera to an analog monitor, the camera must be connected to DC 12V / AC 24V power supply.

1.3.3 Controls

- **Reset:** use an appropriate tool to press the button for few seconds to reset the camera
Hold for 5 seconds to reboot camera. Hold longer than 5 seconds to load default settings.

1.4 Specifications

| Image System | |
|-----------------------------------|--|
| Image Sensor | 1/3" 2 MP image sensor optimized for low-light performance |
| Image Compression Method | Triple Streaming : H.264 / MPEG4 / Motion JPEG |
| Maximum Frame rate vs. Resolution | HDTV 1080p(1920x1080) at 15 fps (NTSC) and 12.5 fps (PAL) and 2MP 16:9 (1280x720) at 30 fps (NTSC) and 25 fps (PAL) |
| Lens | Built-in Fixed Lens f=4mm, F1.5 (Mega pixel lens) |
| View Angle | H: 65.4°/V:49.9° |
| View Angle Adjustment | Pan:0°-355°, Tilt:0°-90°, Rotate:0°-355° |
| Electric | |
| Shutter Time | Range from 1/10000s to 1/3.75s selectable (60Hz); Range from 1/10000s to 1/3.125s selectable (50Hz) |
| Day/Night Mode | Auto |
| Minimum Illumination | 0.1 Lux @10 IRE; 0.4 Lux @50 IRE (shutter speed: 1/15sec) |
| Video Port | BNC X1, 1.0Vp-p, 75Ω / RCA x 1 |
| Video Output | NTSC: 720 X 480 @30fps; PAL: 720 X 576 @25fps |
| Image Enhance | Exposure Mode: Auto/Manual White Balance: Auto/Manual Backlight Compensation: 5x5 zones selectable Sharpness, Saturation, Brightness, Contrast: 255 level sensitivity |
| Feature Brief | |
| Alarm Detection | Motion Detection: 5 x 5 zones, 5 level sensitivity or customized threshold |
| Alarm Event | File upload via FTP and SMTP. Notification via email, HTTP and TCP |
| Image Orientation | Mirror, Flip |
| Bit Rate Mode | Primary stream bit rate control: CBR/VBR |
| Power supply | |
| Power Requirement | DC 12V & AC 24V ± 10% / PoE (IEEE 802.3af) |
| Power Connector | Screwless terminal block |
| Power Consumption (Max.) | 5W |
| Environment | |
| Operating Temperature | -10°C ~ 50°C (-14°F ~ 122 °F) |
| Operating Humidity | 10~ 90% RH |
| Storage Temperature | -20°C ~ 60°C (-4°F ~ 140 °F) |
| Regulatory | CE, FCC, RoHS |
| Network | |
| Ethernet | 10Base-T/100Base-TX Ethernet connection for LAN / WAN, RJ-45 |
| Internet Protocol | IPv4, TCP/IP, UDP, HTTP, SMTP, DNS, DHCP, NTP, FTP, RTP, |

| | |
|-------------------------|--|
| | RTSP, ICMP, UPnP |
| Browser | IE browser 6.0 or above |
| I/O connector | |
| Reset | Within 5 sec for rebooting system; more than 5 sec for loading default |
| Mechanism | |
| Dimensions (ΦxH) | Φ138mm x H102mm (Φ5.43" x 3.98") |
| Weight | 1.13kg (2.5lb) |
| Accessory | |
| Mount Type | Surface mount (standard package support) Pendent mount, Wall mount |

2. Camera Installation

2.1 Ceiling Mount

1. Remove the dome cover and the inner liner.

Loosen the screw that securing the dome cover. Then rotate the dome cover clockwise to unlock and pull it free of the housing.

2. Use the Guide Pattern Sticker to drill the mounting holes.

Place the provided “**Guide Pattern Sticker**” on the desired mounting location. Drill four mounting holes according to the guide pattern. Drill one cable entry hole if you want to feed the wiring through the hole.

3. Connect the wiring.

Draw out the cabling to the connecting places. Refer to “**1.3.2 Connectors**” section to make connections as required.

To adjust the field of view and focus, you can optionally connect a monitor to the **Video out RCA jack** at this point. If no monitor is available, then focus must be performed by using an Internet browser to view the camera images.

Caution: For DC power supply use, make sure the polarity is correct to avoid malfunction and / or camera damage.

4. Secure the camera base to the surface.

Use appropriate screws according to the mounting surface material. If required, you may require different screws and anchors than those supplied.

For concrete surfaces:

Use the provided rubber feet for concrete surfaces to free the cable.

Insert the provided plastic anchors into the four drilled holes. Then secure the camera base to the mounting surface with the provided tapping type screws.

For other surfaces:

Do not use the plastic anchors. Just secure the camera base to the mounting surface with the provided machine type screws.

5. Install the inner liner.

Fit the camera inner liner over the camera base so that it snaps into place.

6. Replace the dome cover.

Put the dome cover over the base and tighten the cover screw.

2.2 Adjusting the Camera

Pan adjustment: Rotate the lens base to adjust the horizontal angle.

Tilt adjustment: Tilt the lens base to adjust the vertical angle.

Horizontal rotation: Rotate the dome base to adjust the horizontal position. Do not turn the base more than 355° as this may cause the internal cables to twist and disconnect or break.

3. Network Connection and Configuration

3.1 Network Connection Types

There are many different ways that you can connect the camera to your network, depending on your applications requirements. You should always set the camera's network settings according to your network configurations. The following diagrams depict some typical applications with guidelines on network settings. For more information on network settings, always consult with your network administrator or ISP as required.

Type 1— Direct Connection to a PC

Directly connect the camera to a PC using a standard Ethernet cable.

To extend the connection length, you should use a RJ45 female/female coupler to connect two Ethernet cables together.

Note: The LAN port of the camera supports auto MDI/MDIX (Medium dependent interface crossover) so there is no need to use cross-over cable.

To access the camera, the PC must be on the same network as the camera. The default IP address of the camera is a static one (192.168.1.30). Configure your PC's IP address as 192.168.1. X (where X is a number between 2 to 254, excluding 168 and subnet mask as 255.255.255.0, and then your PC should be able to access the camera.

Type 2: Connecting Camera(s) to a Local Area Network (LAN)

To add the camera(s) to an existing LAN, just connect the camera(s) to the hub or switch on your network. If you want to provide the camera power via the Ethernet connection, a PoE-enabled hub/switch is required.

Note: The LAN port of the camera supports auto MDI/MDIX (Medium dependent interface crossover) so there is no need for an uplink port or the use of a cross-over cable.

Assign an IP address to your camera following your network IP allocation policy. You can manually specify the IP address or allocate the IP address automatically using a DHCP server, if available on your network.

Then, you can monitor and manage the camera via a web browser from a local PC.

Type 3: Remote Connection via the Internet

If the network where the camera resides is connected to the Internet, you can also provide remote access to your camera over the Internet.

Typically a broadband router has a built-in DHCP function to assign a local IP address to your camera. You can alternatively assign a fixed IP address to the camera to prevent it from frequently changing.

To access the camera from a local PC, simply use the local IP address of the camera.

To enable remote access, you must configure your router/firewall to forward an incoming request to that fixed local IP address of the camera. Therefore, when an external host sends a request to access your camera, the request will first reach the router's external IP address and then be forwarded to the local IP address of the camera.

Port forwarding is based on the service you want to provide. For example, forward HTTP port to enable remote web access to your camera, or RTSP port to enable access to video/audio streams from the camera.

If your camera is configured to use a non-standard HTTP port, then you have to forward that port accordingly.

3.2 Accessing the Camera for the First Time

The camera comes with a web-based setup utility, allowing you to view the video of the camera and configure the camera for optimal use in your environment.

To access the camera's web-based control utility, you need a PC that meets the following requirements:

- **Operating System:** Windows Vista® or XP
- **Browser:** Internet Explorer Version 6.0 or later
- **CPU:** Intel Pentium 4.2 GHz or higher
- **RAM:** 512 MB or more

Then take the following steps to connect your PC to the camera.

Step 1: Make the connection

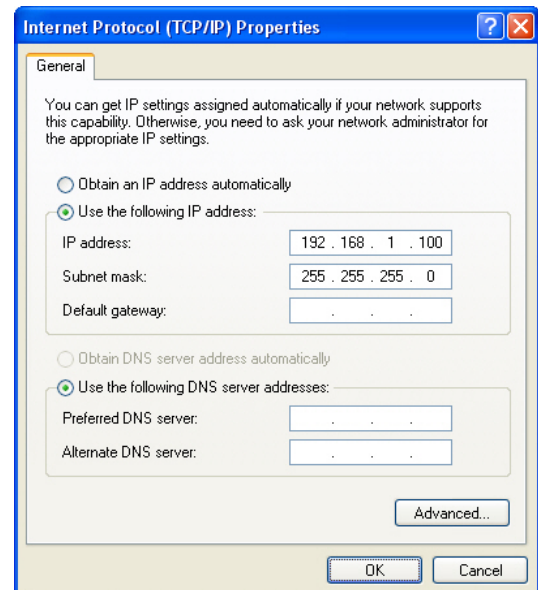

For initial setup purposes, connect one end of an Ethernet cable to the RJ45 connector of the camera and the other end to the LAN port on your PC.

Step 2: Configure your PC's IP address

The camera uses a default IP address of 192.168.1.30 and subnet mask of 255.255.255.0. To have your PC on the same network with the camera, configure your PC's IP settings as below:

- **IP address:** 192.168.1. X, where X is a number between 2 to 254, excluding 30.
- **Subnet mask:** 255.255.255.0.

Ignore all other settings and click **OK**.

Step 3: Verify the connection between the PC and the IP Cam

1. Launch the Command Prompt by clicking the **Start** menu, **Programs**, **Accessories** and then **Command Prompt**.
2. At the prompt window, type `ping x.x.x.x`, where x.x.x.x is the IP address of the camera (the default is 192.168.1.30).

If the message of “**Reply from...**” appears, it means the connection is established.

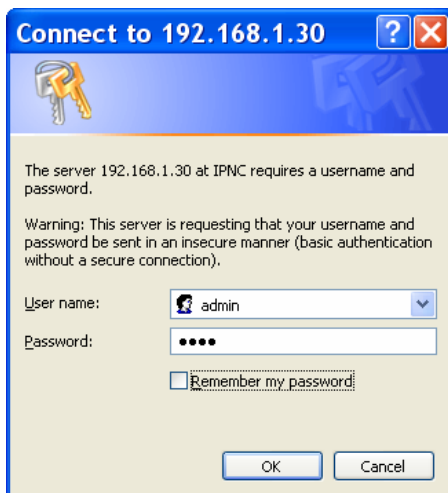

Step 4: Access the camera from IE browser

Open the IE browser and enter the IP address of the camera in the URL field. The default is 192.168.1.30.

When prompted to login, enter the user name and the password. (The defaults: admin, 1234). Note that the password is case-sensitive.

Upon successful login, you will see the live view screen shown as the example below:

3.3 Using “IP Finder” to Manage Cameras

IP Finder is a management tool included on the product CD. It is designed to manage your network cameras on the LAN. It can help find multiple network cameras, set IP addresses, show connection status and manage firmware upgrades.

3.3.1 Installing IP Finder

Before proceeding, make sure your operating system is Windows Vista or Windows XP.

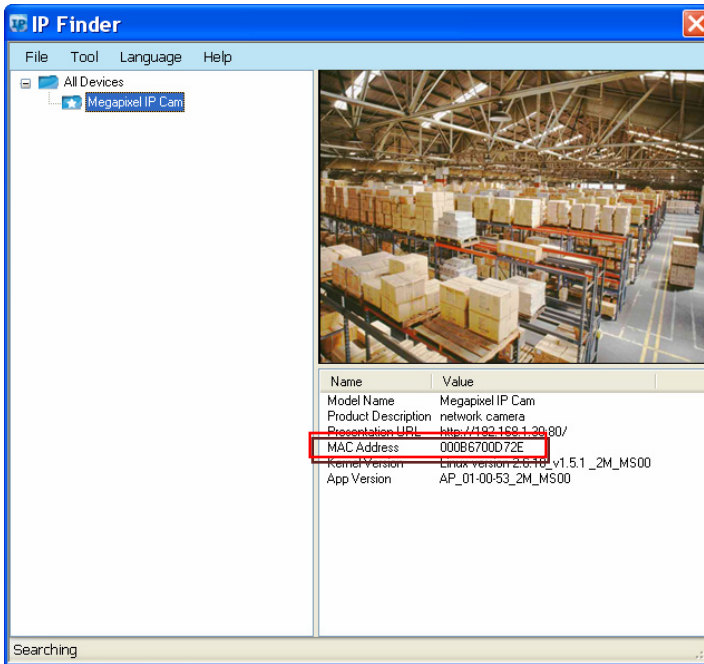

To install the software, simply locate and double-click the **IP Finder** setup file on the provided CD. Then follow the on-screen prompts to proceed.

3.3.2 Using IP Finder

To launch IP Finder, double-click the **IP Finder** shortcut on the desktop or click **Start > Programs > IP Finder > IP Finder**.

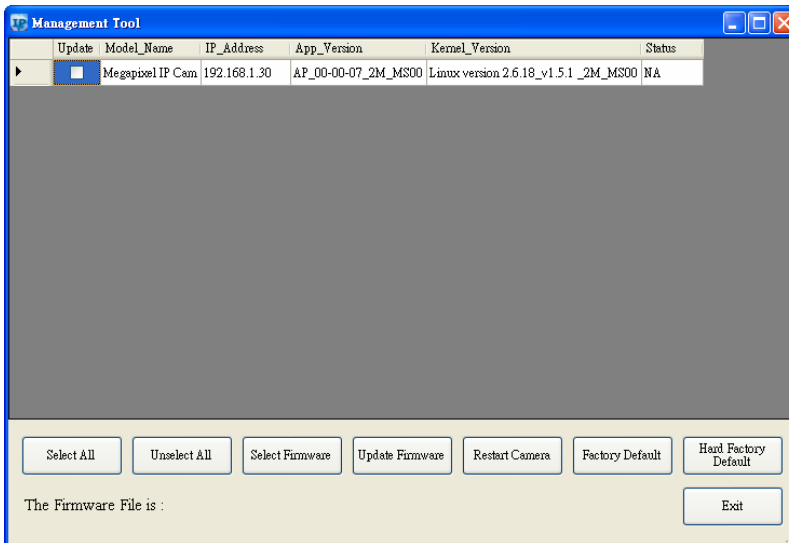

After you launch **IP Finder**, it will search for all the available cameras on the same network. Click the plus sign next to “**All Devices**” to expand the menu and display all the found cameras.

Clicking a target camera will show the live view (if available) and the detailed information of the camera, including the MAC address. Each camera comes with a unique MAC address, which is indicated on the product label. It helps identify which camera is currently accessed, particularly when multiple cameras are connected on your network.

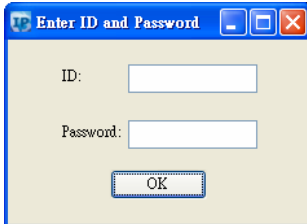

The **Tool** menu of the **IP Finder** allows you to perform these tasks:

- **Search Network:** This option allows you to search the cameras on the network.
- **Set Master ID and Password:** Allows you to set a master ID and password for managing the cameras with IP Finder.
- **Management Tool:** Allows you to restart the camera, update firmware, reset all of the camera settings to default (except network settings) and reset all of the camera parameters to default.

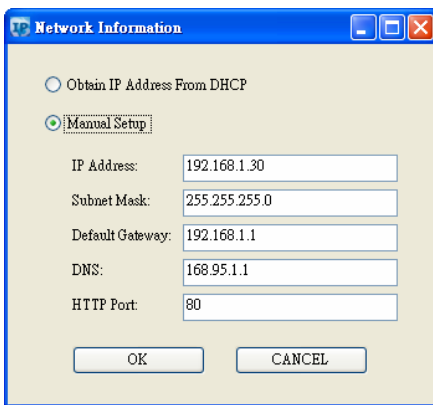

For an individual camera, right-click the camera and a menu will provide these options:

- **Go to Presentation URL:** Launch IE browser to access the web-based utility of the camera.
- **Set Device ID and Password:** Set the login ID and password for managing the camera with IP Finder.

The screenshot shows a dialog box titled "Enter ID and Password". It contains two text input fields: "ID:" and "Password:". Below the fields is an "OK" button.

Network Information: Allows you to configure the camera's network settings.

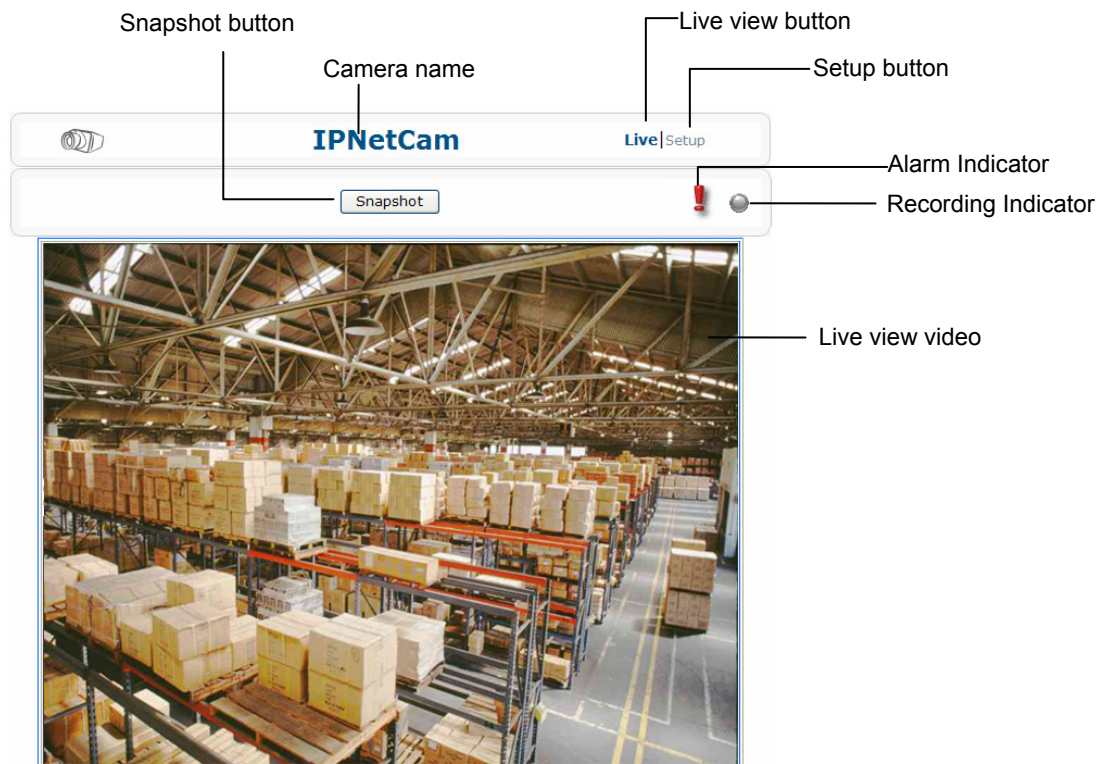

The screenshot shows a dialog box titled "Network Information". It has two radio buttons: "Obtain IP Address From DHCP" (unselected) and "Manual Setup" (selected). Below the radio buttons are five text input fields with the following values: "IP Address: 192.168.1.30", "Subnet Mask: 255.255.255.0", "Default Gateway: 192.168.1.1", "DNS: 168.95.1.1", and "HTTP Port: 80". At the bottom are "OK" and "CANCEL" buttons.

4. Using Web-based Control Utility

4.1 Overview

4.1.1 Main Screen

After you login to the camera's web-based control utility, you will first see the live view screen of the camera. The screen is like the picture below:

The live view screen of the utility provides these options:

- **Snapshot:** Pressing this button takes a snapshot of current live view screen.
- **Live:** Pressing this button displays the live view of the camera.
- **Setup:** Pressing this button allows you to access the setup page.
- **Camera name:** Displays the name of the camera.
- **Recording Indicator:** Turns red only when the recording is proceeding.
- **Alarm Indicator:** Appears when an alarm is triggered.
- **Live view video:** Shows the live view of the camera.

Note that the accessibility to the options varies according to the login account.

- **Viewer:** Allowed to view only the live view screen. Access to other options are restricted.
- **Administrator:** Can access all the options on the live view page and make configurations on the setup pages.

4.1.2 Setup Menu

The **Setup** options are categorized into four groups: **Image**, **Network**, **System** and **Event**. Clicking the name will expand its sub-menu. See the ensuing sections for more information.

4.1.3 Applying Settings

Each configuration page provides a **Save** button. Settings are applied right after you press the **Save** button. And the browser will refresh to load the latest setting or otherwise pop up the “**Save OK**” message to indicate that settings have been applied.

4.2 Image Settings

4.2.1 Codec

The Codec page allows you to configure the video streams for the camera. You can optionally configure a secondary or third stream to a resolution as required by your third-party device or software.

| Basic Setting | |
|-------------------------------------|--------------------------------|
| Camera Name: | IPNetCam |
| Primary Stream: | Codec: H264 |
| | Resolution: 1080P (1920x1080) |
| | Bit Rate: 8000 kbps (500~8000) |
| | Frame Rate: 15 FPS |
| Secondary Stream: | Codec: OFF |
| | Resolution: ... |
| | Bit Rate: 4000 Kbps (500~4000) |
| | Frame Rate: 15 FPS |
| Third Stream: | Codec: MJPEG |
| | Resolution: VGA (640x480) |
| Mirror: | OFF |
| Rate Control: | VBR |
| TV Out Stream | ON |
| <input type="button" value="Save"/> | |

Each codec comes with different parameters as described below:

Camera Name Settings

- Enter a descriptive name of the camera. Note that if you want to make your camera ONVIF compliant (see **Network > ONVIF**), no space is allowed for camera name.

H.264 Codec Settings

- **Resolution:** Choose the resolution for video compression. Choices include 1080P, SXVGA, 720P, XGA, SVGA and D1.
- **Bit Rate:** According to your bandwidth, specify a value for data transmission rate (kbps). Higher value gets higher video quality but consumes more bandwidth.
- **Frame Rate:** Choose the intended frame rate, i.e., the video frame to transmit per second. The higher the frame rate, the higher the quality of recording.

MPEG4 Codec Setting

- **Resolution:** Choose resolution size. Choices include 1080P, SXVGA, 720P, XGA, SVGA and D1.
- **Bit Rate:** According to your bandwidth, specify a value for data transmission rate (kbps). Higher value gets higher video quality but consumes more bandwidth.
- **Frame Rate:** Choose the intended frame rate, i.e., the video frame to transmit per second. The higher the frame rate, the higher the quality of recording.

MJPEG Codec Settings

- **Resolution:** Choose the resolution for video. Choices include 1080P, SXVGA, 720P, XGA, SVGA and D1.
- **Quality:** Set the image's quality as High, Normal or Low.
- **Frame Rate:** Choose the intended frame rate, i.e., the video frame to transmit per second. For example, 10 fps means 10 frame transmissions per second.

Notes:

1. Live View uses the MJPEG codec. If no streaming is using MJPEG, it will result in no video for live view.

2. If MJPEG is selected for both the primary stream and the third stream, Live View will always display video using the third stream codec.

Mirror Settings

This option allows you to mirror or flip the video image if required.

- **OFF:** Turn off this function.
- **HORIZONTAL:** Flips the images horizontally.

- **VERTICAL:** Flips the images vertically.
- **BOTH:** Flips the images vertically and horizontally.

Rate Control

Choose a bit rate control to manage your bandwidth usage.

- **Variable Bit Rate (VBR):** VBR keeps the video stream quality as constant as possible by varying bit rate. This mode ensures high quality image for motion scene and is often selected when image quality demands priority. However, this mode requires more bandwidth in order to vary the bit rate.
- **Constant Bit Rate (CBR):** CBR maintains a specific and constant bit rate by varying the stream quality. With CBR, streaming is smooth and network throughput is stable for any scene. This mode is typically used with a limited bandwidth environment.

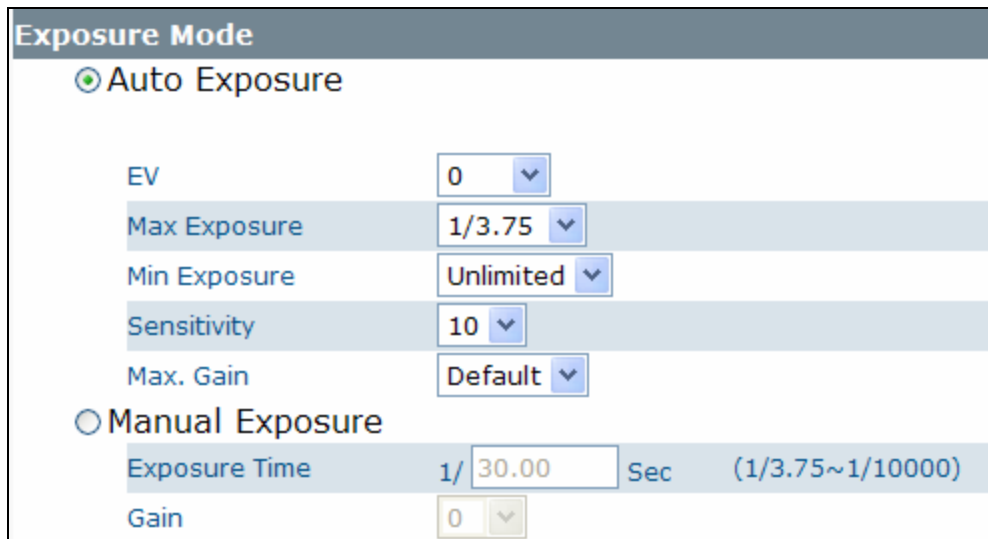

Refer to the table below for selectable codec types for each streaming:

| Streaming Combination | | | | | |
|-----------------------|------------------------------------|------------------------------------|--------------------------|-------|------------|
| Primary | | Secondary | | Third | |
| Codec | Resolution | Codec | Resolution | Codec | Resolution |
| MJPEG | 1080P | OFF | N/A | OFF | N/A |
| | | H264 MPEG4 | D1 VGA 2CIF CIF | | |
| | SXVGA 720P XGA SVGA D1 | OFF | N/A | OFF | N/A |
| | | H264 MPEG4 | D1 VGA 2CIF CIF | MJPEG | VGA CIF |
| | | | | OFF | N/A |
| | | | | MJPEG | VGA CIF |
| H264 MPEG4 | 1080P | OFF | N/A | OFF | N/A |
| | | SXVGA 720P XGA SVGA D1 | OFF | N/A | MJPEG |
| | OFF | | | | N/A |
| | MJPEG | | | | VGA CIF |
| | OFF | | | | N/A |
| | H264 MPEG4 | D1 VGA 2CIF CIF | OFF | N/A | MJPEG |

4.2.2 Exposure

The **Exposure** page allows you to configure the **Exposure Mode** and **Backlight Compensation** settings according to the light conditions of the camera.

Exposure Mode

Exposure Mode

Auto Exposure

EV

Max Exposure

Min Exposure

Sensitivity

Max. Gain

Manual Exposure

Exposure Time Sec (1/3.75~1/10000)

Gain

Auto Exposure Settings

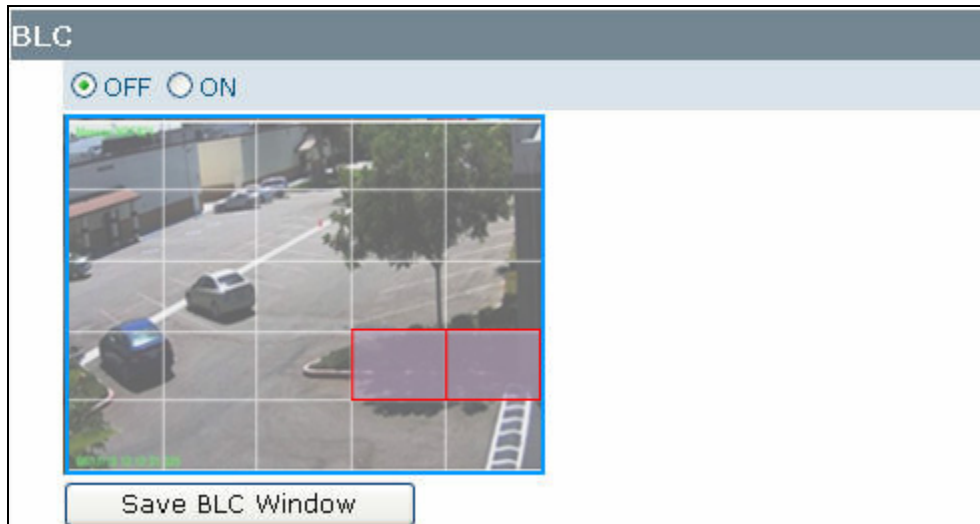

- **EV:** In a scene with predominantly light or dark areas, the image will be underexposed or overexposed, causing an image to be too dark or bright. In such situations, you can adjust a compensation value to optimize the exposure. Decrease the value if images appear too light (overexposed). Increase the value if images are too dark (underexposed).
- **Max/Min. Exp:** Select the maximum / minimum exposure time according to the light source.
Note: The selectable value varies according to the frequency setting under **Image > Basic Settings**.
- **Sensitivity:** Select how sensitive the camera reacts to the light. A higher value enables the camera to be more sensitive to the light conditions and adjust exposure in the shortest time interval.
- **Max Gain:** Specify the maximum amount of amplification applied to the image. A high level of gain allows images to be viewable in very low light, but will increase image noise.

Manual Exposure Settings

- **Exposure Time:** Enter a desired exposure time.
- **Gain:** Select a gain value from 0 to 16. A high level of gain allows images to be viewable in very low light, but will increase image noise.

BLC (Backlight Compensation)

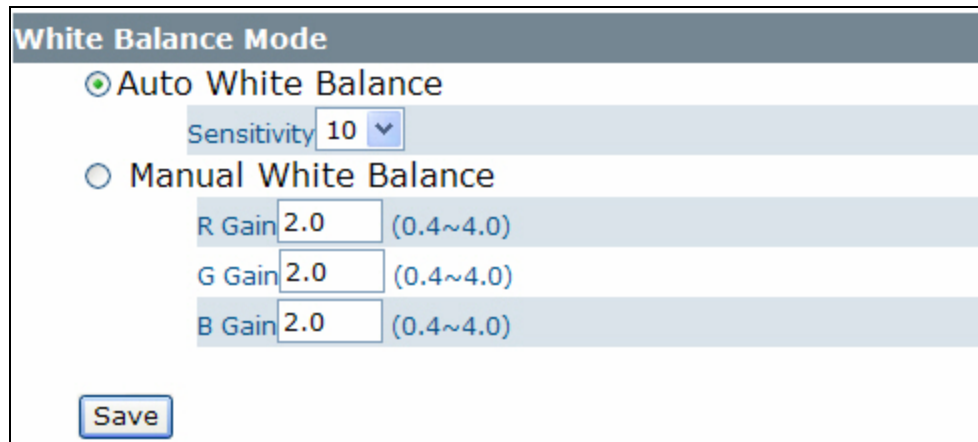

The **Backlight Compensation** function allows you to provide optimal exposure of subjects under back light circumstances.

- **OFF/ON:** Choose to enable or disable the BLC function.
- **BLC area setting:** BLC area refers to the dark area where more details are expected. Define your BLC area by clicking squares displayed on the screen and then press **Save BLC Window** to save the setting.

4.2.3 White Balance

Select a white balance mode according to external light condition for the best color temperature. Please click the “Save” button to save your image settings.

The screenshot shows a settings window titled "White Balance Mode". It contains two radio button options: "Auto White Balance" (which is selected) and "Manual White Balance". Under "Auto White Balance", there is a "Sensitivity" dropdown menu currently set to "10". Under "Manual White Balance", there are three input fields for "R Gain", "G Gain", and "B Gain", each with a value of "2.0" and a range of "(0.4~4.0)". A "Save" button is located at the bottom left of the window.

Select a white balance mode according to your light condition.

- **Auto White Balance:** Use this option when there is no special lighting in the environment. The camera will automatically adjust the color temperature according to the light conditions and the sensitivity you specify. The higher the sensitivity, the faster the adjustment. If the lighting conditions change frequently, select a lower sensitivity to prevent the camera from frequently changing white balance.
- **Manual White Balance:** With special light in the environment, you can use this option to manually adjust the red, green and blue channels, which are mostly affected by special light. For example, if red color is too bright, then you should lower the R Gain value.

4.2.4 Basic Settings

This page allows you to specify a frequency and adjust the basic image settings to optimize your video image.

The screenshot shows a web interface titled "Basic Setting". It contains the following elements:

- Frequency:** Radio buttons for "50 Hz" and "60Hz". The "60Hz" option is selected.
- TV System:** Radio buttons for "NTSC" and "PAL". The "NTSC" option is selected.
- Brightness:** A numeric input field with left and right arrow buttons, showing the value "128" and a range "(0-255)".
- Contrast:** A numeric input field with left and right arrow buttons, showing the value "128" and a range "(0-255)".
- Saturation:** A numeric input field with left and right arrow buttons, showing the value "128" and a range "(0-255)".
- Sharpness:** A numeric input field with left and right arrow buttons, showing the value "128" and a range "(0-255)".
- Buttons:** A "Save" button at the bottom left and a "Default All Image Parameters." button at the bottom center.

- **Frequency:** Select an appropriate frequency to reduce the flicker on the image. "50 Hz" and "60 Hz" are provided

Note: Frequencies settings will affect the **Max. Exposure** and **Min. Exposure** settings under **Image > Exposure**.

- **TV System** Displays current video standard: NTSC or PAL. This setting cannot be changed via web interface. You can only switch the video standard using the hardware switch.
- **Brightness:** Adjust the image brightness level.
- **Contrast:** Adjust the image contrast level.
- **Saturation:** Adjust the image saturation level.
- **Sharpness:** Adjust the image sharpness level.
- **Default All Image parameters:** Pressing this button will restore all the image settings to the defaults.

4.3 Network

4.3.1 Basic

| Basic Setting | |
|-------------------------------|---------------------|
| <input type="checkbox"/> DHCP | |
| IP Address: | 192.168.1.30 |
| Subnet Mask: | 255.255.255.0 |
| Default Gateway: | 192.168.1.1 |
| DNS: | 168.95.1.1 |
| HTTP Port: | 80 [80, 1025~65535] |
| MAC: | 00:0b:67:00:d9:e5 |

Save

- **DHCP:** If there is a DHCP server on the network and you enable this option, the server will automatically assign an IP address and related information to the camera.

Note: If there is no DHCP server on your network or you prefer to manually assign an IP address to your camera, leave this checkbox blank.

- **IP Address & Subnet Mask:** If DHCP function is not enabled, you have to assign an IP address with the subnet mask to the camera.
- **Default Gateway:** Enter the IP address of the gateway if required. Please contact your network administrator whether you need to set up the gateway.
- **DNS:** Enter the IP address of a DNS server. If you enter a domain name instead of an IP address in server-related fields, e.g., FTP, SMTP or NTP server, then the camera will need a DNS server to translate domain names into an IP address that is actually used for communication on the Internet.
- **HTTP Port:** Use the standard HTTP port number 80 or alternatively specify another port number between 1025 and 65535.

If you choose to use a non-standard port, and your camera on the LAN is to be accessible from the Internet, then you must configure your router/firewall to forward incoming HTTP request to that specified port (via NAT/port forwarding settings).

- **MAC:** Display the MAC address of the camera. Each camera comes with a unique MAC address, which is indicated on the product label. It helps you to identify which camera is currently accessed, particularly when multiple cameras are connected on your network.

4.3.2 FTP

To allow the camera to upload recorded video clip/JPEG files to a FTP server, you have to specify a FTP server and configure related settings.

FTP

Basic Setting

FTP Server IP: 192.168.1.1

FTP Server Port: 21 [20,21,1024~ 65535]

User Name:

Password:

File Upload Path: default_folder

Save

- **FTP Server IP:** Enter the IP address of your FTP server.
- **FTP Server Port:** Enter the port number of the FTP server.
- **User Name:** Enter the user name to logon to the FTP server.
- **Password:** Enter the password to logon to the FTP server.
- **File Upload Path:** Specify the folder which has been created under FTP server root directory.

4.3.3 SMTP

To allow the camera to send you email notification on alarm when an event is triggered, you need to specify a SMTP server to send the e-mail.

SMTP

Basic Setting

My Server Requires Authorization.

SMTP Server IP: 192.168.1.1

User Name:

Password:

Sender:

Receiver:

Save

- **My Server Requires Authorization:** If your SMTP server requires authorization to send e-mail, enable this option.
- **SMTP Server IP:** Enter the IP address of your SMTP server.
- **User Name:** Enter the user name to logon to the SMTP server.
- **Password:** Enter the password to logon to the SMTP server.
- **Sender:** Enter the e-mail address to be shown as the sender of the notification e-mail.
- **Receiver:** Enter the e-mail address to which the notification e-mail is sent.

4.3.4 NTP

If you want your camera to synchronize its time clock with a NTP (Network Time Protocol) sever, configure the NTP server settings here.

NTP
Basic Setting

NTP Server:

Time Zone:

Automatically Adjust for Daylight Saving Time Changes.

Save

- **NTP Server IP Address:** Enter the IP address or domain name of the NTP server you want to use.
- **Time Zone:** Select a time zone in which the camera is located.
- **Automatically Adjust for Daylight Saving Time Changes:** Check this check box if you want the camera to adjust the daylight saving time automatically.

4.3.5 RTSP

RTSP is a standard for connecting a client to establish and control streaming data over the web. If you want to allow third-party devices or software to access video/audio streams from the IP camera over the network, you must configure the RTSP ports. You can provide five streams according to the specific codec mode with different RTSP port.

RTSP
RTSP Port Setting

| | | |
|-----------|-----------------------------------|-----------------|
| Stream 1: | <input type="text" value="8555"/> | MJPEG/Primary |
| Stream 2: | <input type="text" value="554"/> | MPEG4/Primary |
| Stream 3: | <input type="text" value="8554"/> | MPEG4/Secondary |
| Stream 4: | <input type="text" value="8558"/> | MJPEG/Third |
| Stream 5: | <input type="text" value="8556"/> | H.264/Secondary |
| Stream 6: | <input type="text" value="8557"/> | H.264/Primary |

Port Value Range:(554~65535)

Save

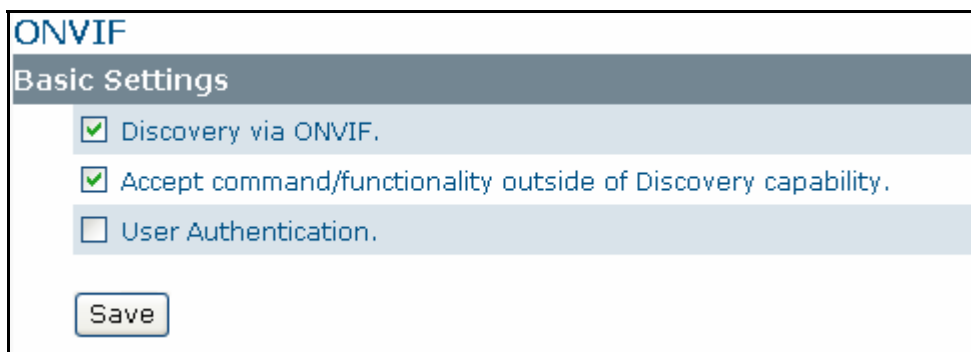

To use a RTSP player to access the camera's streams, you have to use correct RTSP URL to request the streams. Refer to the table below for RTSP URLs:

| | |
|-----------------|--------------------------------|
| MJPEG Primary | rtsp://192.168.1.30:8555/mjpeg |
| MJPEG Third | rtsp://192.168.1.30:8558/mjpeg |
| H.264 Primary | rtsp://192.168.1.30:8557/h264 |
| H.264 Secondary | rtsp://192.168.1.30:8556/h264 |
| MPEG4 Primary | rtsp://192.168.1.30:554/mpeg4 |
| MPEG4 Secondary | rtsp://192.168.1.30:8554/mpeg4 |

*Replace the IP address and the port number with your camera's settings if otherwise configured.

4.3.6 ONVIF

ONVIF is a standard that ensures interoperability between IP-based physical security products regardless of manufacturer. This camera is ONVIF compliant and you can configure whether the camera can be found by other ONVIF compliant products and the related settings.

ONVIF

Basic Settings

- Discovery via ONVIF.
- Accept command/functionality outside of Discovery capability.
- User Authentication.

Save

- **Discovery via ONVIF:** Check this option if you want the camera to be discovered by other ONVIF compliant devices in a network, e.g., an ONVIF compliant NVR.
- **Accept command/functionality outside of Discovery capability:** If checked, the camera is allowed to accept commands from ONVIF compliant device thus changing the camera's functionality.
- **User Authentication:** If an ONVIF compliant device needs authentication for communication, then you should enable this option.

4.4 System

4.4.1 Date and Time

Date & Time

Current Time

Date: 2011-3-10 Time: 08:57:49

New Time

Set Manually

Date: 2011-3-23

Time: 21:4:9

Synchronize with Computer Timer

Date: 2011-3-23 Time: 21:05:28

Synchronize with NTP Server

NTP Server: tw.pool.ntp.org

Time Zone: GMT+08 Taipei, Beijing, Hong Kong

Date Format: YYYY/MM/DD

Save

Current Time

Displays the current date and time of the camera. Date and time will update after you configure new settings in the **New Time** section and click **Save** to apply the settings.

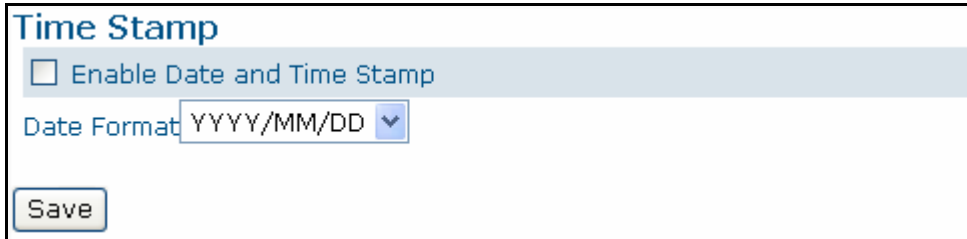

New Time

You can set the camera time by one of the following methods:

- **Set Manually:** Manually enter your camera's date and time settings in the given fields.
- **Synchronize with Computer Timer:** Use this option to synchronize your camera's date and time with the computer timer.
- **Synchronize with NTP Server:** Use this option to synchronize your camera's date and time with an NTP (Network Time Protocol) server, which is configured under **Network > NTP**.
- **Date format:** Allows you specify a desired date format.

4.4.2 Time Stamp

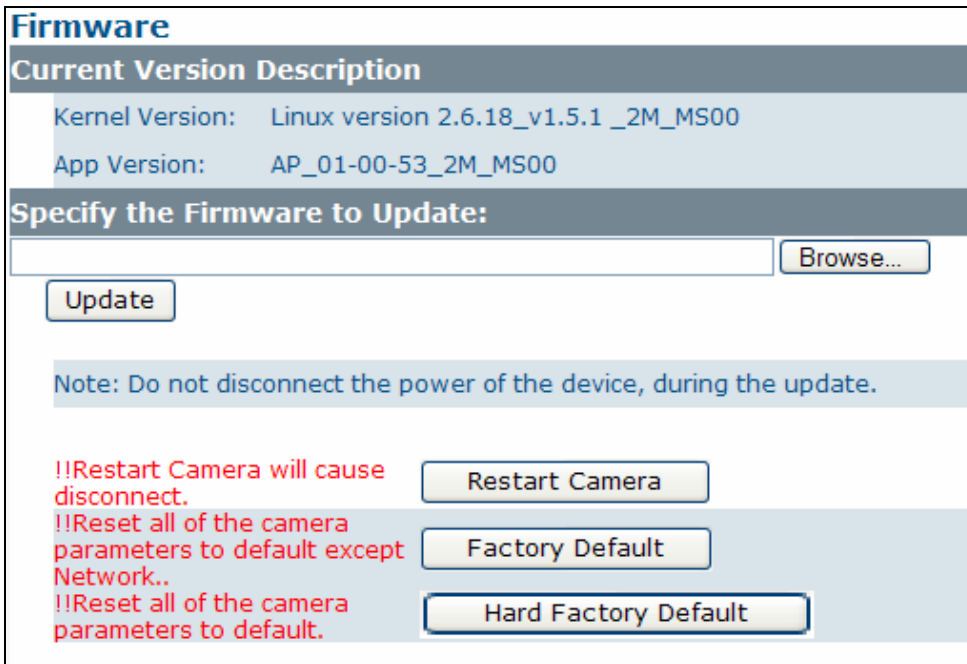

The **Time Stamp** function allows you to overlay the time stamp on video. If you enable the Time Stamp function, the recorded video will also be added with time stamp.

The screenshot shows a configuration window titled "Time Stamp". It contains a checkbox labeled "Enable Date and Time Stamp" which is currently unchecked. Below the checkbox is a "Date Format" dropdown menu set to "YYYY/MM/DD". At the bottom of the window is a "Save" button.

- **Enable Date and Time Stamp:** Check this box to enable or disable the date and time stamp on images/video clips.
- **Date Format:** Select the desired date format for the time stamp.

4.4.3 Firmware

The screenshot shows a configuration window titled "Firmware". It is divided into several sections:

- Current Version Description:** A table showing the current firmware details:

| | |
|-----------------|--------------------------------------|
| Kernel Version: | Linux version 2.6.18_v1.5.1 _2M_MS00 |
| App Version: | AP_01-00-53_2M_MS00 |
- Specify the Firmware to Update:** A section with a text input field and a "Browse..." button. Below the input field is an "Update" button.
- Note:** A blue banner with the text: "Note: Do not disconnect the power of the device, during the update."
- Restart and Reset Options:** Three buttons are provided with red warning text:
 - "Restart Camera" button with text: "!!Restart Camera will cause disconnect."
 - "Factory Default" button with text: "!!Reset all of the camera parameters to default except Network.."
 - "Hard Factory Default" button with text: "!!Reset all of the camera parameters to default."

Current Version Description: Displays current version of the firmware.

Specify the firmware to update: This function is designed to update the firmware of the camera. To perform the firmware upgrade, follow these parameters:

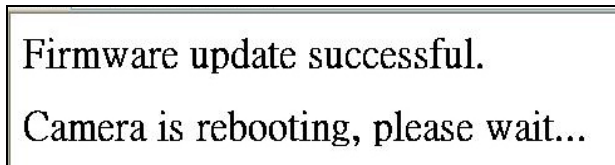

- Keep the network connected during the update process.
- DO NOT turn off or restart the camera during the firmware update process.

To upgrade the firmware:

1. Click the **Browse** button to locate the firmware file.
2. Click the “**Load Firmware to Camera**” button to start upgrade.
3. When prompted, click **OK** to proceed.

4. Wait about 20~60 seconds until the file is successfully updated. Once update is completed, the browser will show a message reads “Firmware update success”. Then it will take 60 seconds to restart the camera.

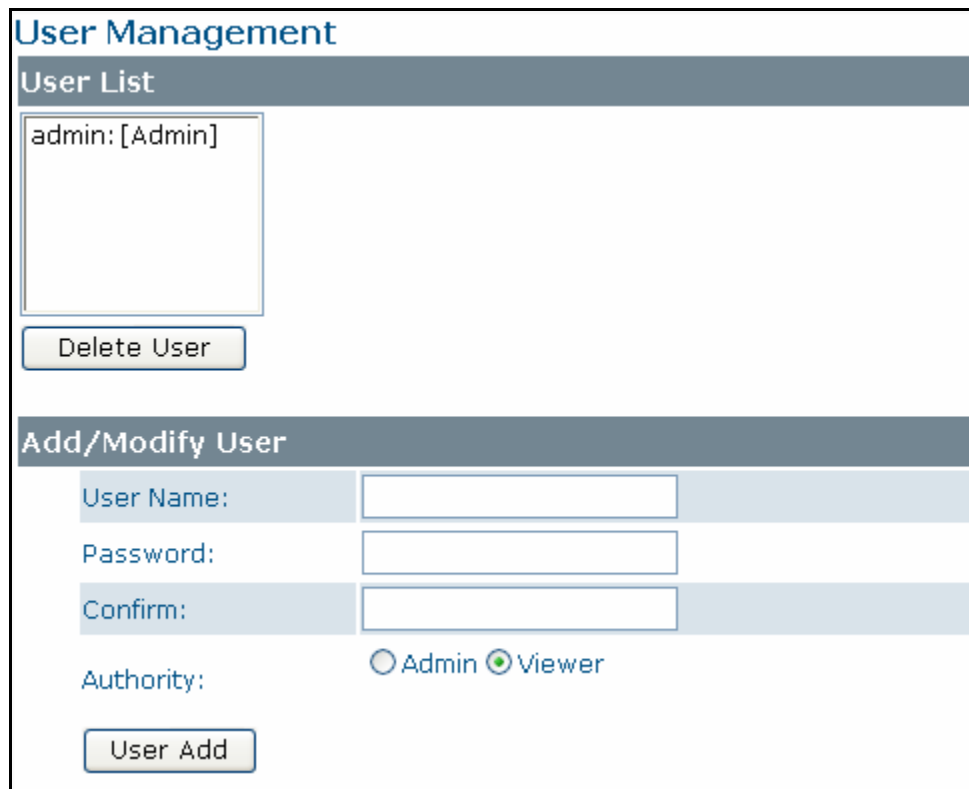

5. The utility will automatically go back to live view screen after firmware has been updated successfully.

You can also perform these tasks on the **Firmware** page:

- **Restart camera:** Restart your camera. This will cause all streams to disconnect.
- **Factory Default:** Reset all of the camera settings to the defaults, except network settings. After you confirm to reset, the camera will reset and restart automatically. When complete, you will return to the live view page.
- **Hardware Factory Default:** Reset all of the camera parameters to the defaults, including the network settings.

4.4.4 User Management

The **User Management** page allows you to manage user accounts and access privileges.

The screenshot displays the 'User Management' interface. It is divided into two main sections. The top section, titled 'User List', contains a table with one entry: 'admin: [Admin]'. Below this table is a 'Delete User' button. The bottom section, titled 'Add/Modify User', contains a form with the following fields: 'User Name:' (text input), 'Password:' (text input), 'Confirm:' (text input), and 'Authority:' (radio buttons for 'Admin' and 'Viewer', with 'Viewer' selected). A 'User Add' button is located at the bottom of the form.

User List

Displays the list of current user accounts of the camera. To delete a user account, select it from the list and then click the **Delete User** button.

Add/Modify User

You can add a new user or modify current user's account or authority.

- To add a new user, enter the user name and password and specify the authority. Then click **User Add** to add a user.
- To modify password of existing user, enter the user name and modify the password.
- Two roles can be specified:
 - **Admin (Administrator)**: Can access all camera functions, pages and make configurations.
 - **Viewer (Guest)**: Can only access the live view page and take snapshot.

4.4.5 Language

The **Language** drop-menu allows you to change the language of the web interface. Supported languages include English, Spanish, Italian, Simplified Chinese and Traditional Chinese. After you click **Save**, the settings is applied and the browser will refresh to reflect the change.

Language

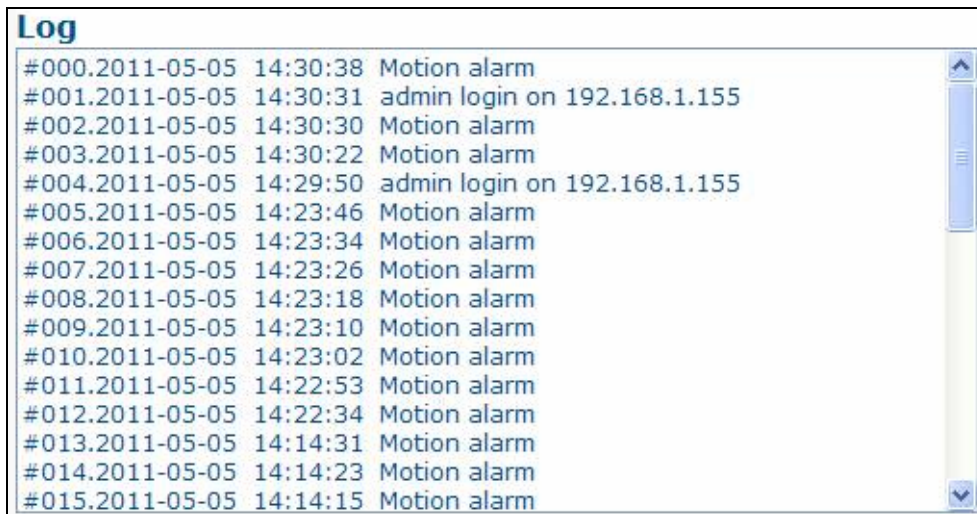

Basic Setting

Language English

Save

4.4.6 Log

This page displays information about the camera's operations and activities, including all the login and alarm records.

| ID | Timestamp | Event |
|------|---------------------|------------------------------|
| #000 | 2011-05-05 14:30:38 | Motion alarm |
| #001 | 2011-05-05 14:30:31 | admin login on 192.168.1.155 |
| #002 | 2011-05-05 14:30:30 | Motion alarm |
| #003 | 2011-05-05 14:30:22 | Motion alarm |
| #004 | 2011-05-05 14:29:50 | admin login on 192.168.1.155 |
| #005 | 2011-05-05 14:23:46 | Motion alarm |
| #006 | 2011-05-05 14:23:34 | Motion alarm |
| #007 | 2011-05-05 14:23:26 | Motion alarm |
| #008 | 2011-05-05 14:23:18 | Motion alarm |
| #009 | 2011-05-05 14:23:10 | Motion alarm |
| #010 | 2011-05-05 14:23:02 | Motion alarm |
| #011 | 2011-05-05 14:22:53 | Motion alarm |
| #012 | 2011-05-05 14:22:34 | Motion alarm |
| #013 | 2011-05-05 14:14:31 | Motion alarm |
| #014 | 2011-05-05 14:14:23 | Motion alarm |
| #015 | 2011-05-05 14:14:15 | Motion alarm |

4.5 Event

When an event occurs, it triggers an alarm and the camera will take a pre-defined action, e.g., sending a recorded video clip or JPEG files to a designated server. With this camera, an event can be triggered by the camera's detection mechanism, such as motion detection.

4.5.1 Motion Detection

When motion detection is enabled, the camera detects motion under a pre-specified condition within a designated area. When motion is detected, the camera will generate an alarm and then take a specified action.

Note: To use the motion detection function, the following two conditions must be met:

1. You must select MJPEG codec for one of the streams to enable the live view.
 2. You must select H.264 or MPEG4 codec for one of the streams to process the motion detection.
-

Motion Detection

Configuration

Motion Sensitivity: Highest (100)
50 (Customized Threshold [1~100])

Save

Motion Area Setting

Save Motion Area

Action

OFF FTP SMTP

Save

Configuration

- **Motion Sensitivity:** Specify the sensitivity to moving objects before the camera triggers an alarm. The higher the sensitivity, the slighter the movement is required to generate an alarm. You can alternatively select **User Define** and enter a value from 1 to 100 in the **Customized Threshold** field. When the motion within a specified area exceeds the threshold, an event is triggered.

When set to **OFF**, motion detection is disabled.

Motion Area Setting

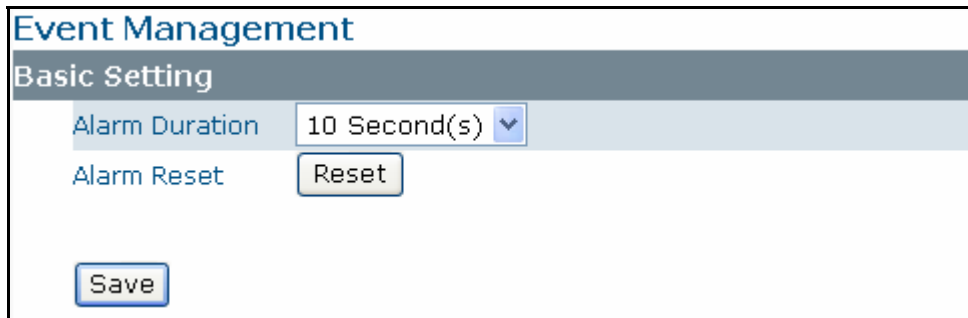

- **Motion area setting:** Click target squares displayed on the screen to define detection areas. Once configured, click “**Save Motion Area**” to save the settings.

Action

Specify the action to be taken when an alarm is triggered upon motion detection:

- **OFF:** No action will be taken, but an alarm will be logged.
- **FTP:** Recorded video clips/JPEG files will be uploaded to a FTP server when alarm is triggered.
- **SMTP:** Notification e-mail with the recorded JPEG files attached will be sent to a SMTP server.

4.5.2 Event Management

The screenshot shows a web interface titled "Event Management" with a sub-section "Basic Setting". Under "Basic Setting", there are two main settings: "Alarm Duration" and "Alarm Reset". The "Alarm Duration" is set to "10 Second(s)" with a dropdown arrow. The "Alarm Reset" is represented by a "Reset" button. At the bottom left of the form is a "Save" button.

- **Alarm Duration:** Specify the duration of the alarm when an event is triggered.
- **Alarm Reset:** Use this button to stop the current alarm and restart event detection again.

5. Using VLC Player to Access RTSP Streaming

Note 1: This information is provided for convenience only. We will not provide support for the installation or use of VLC software.

Note 2: The IP address used in the document are the default URLs and are provided for example purposes only. You will need to use an IP address that is appropriate for your network.

To use VLC player to view RTSP streaming, follow these step to proceed:

1. Download and install VLC Player (version 1.0.5) from <http://www.videolan.org/vlc>.
2. Launch VLC Player
3. Click Media _Open Network Stream.

4. On the **'Network'** tab, choose **RTSP** under the **'Protocol'** menu.
5. Enter the IP address of the stream that you want to view in the **'Address'** field.

Default URL is as below:

| | |
|-----------------|--------------------------------|
| MJPEG Primary | rtsp://192.168.1.30:8555/mjpeg |
| MJPEG Third | rtsp://192.168.1.30:8558/mjpeg |
| H.264 Primary | rtsp://192.168.1.30:8557/h264 |
| H.264 Secondary | rtsp://192.168.1.30:8556/h264 |
| MPEG4 Primary | rtsp://192.168.1.30/mpeg4 |
| MPEG4 Secondary | rtsp://192.168.1.30:8554/mpeg4 |

6. Click **Play** and you will see the image streaming.
